

EXTEND42 Token (EXT)

Whitepaper

05/20/2025

Overview

**A community, a token, a decentralized future
Let's start the journey !**

**Extend is a centralized platform on the way to more and more decentralization.
The goal of Extend is to grow with the community with an educational aim towards decentralization to make it clear and obvious to the greatest number.**

Vision & Mission

Extend is on a mission to promote decentralization, sharing, and supporting.

We believe the transition from web2 to web3 should be progressive, accessible and inclusive. No need to be a crypto expert to start contributing to a decentralized future.

We want to break down the barriers to entry and make decentralization a shared journey.

We truly think that by educating people, we will be part of new big web3 projects that will be beneficial for the community by being transparent and fair.

Join us as we build, test, and refine the foundations of a fairer, more open digital world.

The platform

In line with our vision, the platform will be a place to share Life tips with the community, chat about different topics and create social links by participating to discussion.

New features will be developed in agreement with the community.

The Token

Extend42 Token (EXT) is a BEP-20 token launch on Binance Smart Chain testnet on 20 May 2025.

EXT could be migrated to mainnet later if needed.

We choose Binance Smart Chain for its low fees and compatibility with standard wallets.

Token Utility

The EXT token is designed to be more than just a means of exchange - it's a tool to encourage contribution, engagement, and governance with the Extend42 community. As the platform evolves, so will the token's utility, in close dialogue with users.

Extend42 use cases :

- Transferring value between users
- Accessing platform services
- Unlocking privileges like becoming GoldMember under certain holding or participation conditions. GoldMembers have for now the right to burn token
- Earning rewards by contributing (airdrop)
- Be part of a future governance and have vote right

Tokenomics

Initial Supply : 10 000 000 EXT

Max Supply : 100 000 000 EXT

EXT tokens could be minted without exceeding max supply. The minting process is protect by an initial multi-signature smart contract who could be modified depending on the community and composed at start of :

- **The owner**
- **The team**
- **The community**

Token Allocation

Allocation	%	Number of Tokens
Investors	30.0%	30,000,000
Community	20.0%	20,000,000
Airdrop	20.0%	20,000,000
Team	20.0%	20,000,000
Owner	10.0%	10,000,000
Total	100.0%	100,000,000

Token Release Schedule

Tokens are released at start of the project.

The Airdrop Allocation will be distributed in three main phases :

- Phase 1 Airdrop Q3 2025**
- Phase 2 Airdrop Q1 2026**
- Phase 3 Airdrop Q3 2026**

Eligibility conditions will be kept secret but sharing our vision and use the platform should be a guarantee to be eligible.

Investors have a linear vesting period of two years to unlock their allocation which means by summer 2027 all token from initial supply would be released.

Governance

As previously mentioned, current governance is centralized. However, our long-term goal is to transition toward decentralization governance model driven by the community.

Until the projet reaches a sufficient level of maturity, the existing centralized governance will remain attentive to any decentralized organisation creation. Once the conditions are met, governance power will be progressively be handed over to the community.

That is the reason why the token has been designed to support on-chain governance. The token smart contract allows future action such as :

- **Transferring or renouncing ownership**
- **Enabling community-driven and votes**
- **Granting governance right to token holders**

This way, we intend to place the community at the center of the project's evolution, ensuring transparency, fairness, and long-term sustainability.
